

# Release Notes for COCKPIT4.5.1

## Secure Browsing (builds 4.5.1.03 - 4.5.1.23)

*Created on November 9, 2014*

### Introduction

This document provides you with a list of new features and product upgrades that were implemented in Cockpit 4.5.1. This document is cumulative for all Secure Browsing version 4.5.1 releases.

### New Features

- Support for Google Chrome browser including all features supported in Internet Explorer.
- Support for Windows 8.1 and Windows Server 2012 R2.
- Printing module optimization.
- Upgrading the Comparison Screen in Administration Console by adding new host comparison parameters.
- Full support for multiple monitors' modes, like dual view and switch monitors.
- Ability to configure the splash window that appears upon connecting to Terminal Serve.

### Bug fixes

- Image content can't be copied using Jetro Clipboard.
- CPU extra consumption
- Session resolution was not proper in Windows 8.1.
- Some image content can't be copied in latest IE versions.
- Reporting Internet browsing log wasn't populated
- In the RDP Session screen, the user's fake name was displayed instead of the real one.
- In Session Process screen, the CPU column isn't populated.
- In Internet Explorer 9, flash blocker blocked the flash content partly.
- In RDP session screen, the Memory counter was not populated
- The URL log is populated with unnecessary data.
