What is new in COCKPIT 5.9 release?

Application Delivery (builds 5.9.1.0 – 5.9.1.6)

- Supporting new terminal server 2019.
- Improved custom font capabilities in COCKPIT client.
- Improved icon resolution.
- Improved icon resolution in desktop shortcut mode.
- Improved text shadow in case of background image in COCKPIT client.
- Ability to force COCKPIT client to approve license agreement before connecting to site.
- Ability to remove multiple hosts in admin console.
- Adding a statistics node in admin console with daily user details. Base on client logs.
- Ability to hide Favorites panel when opening client and connecting to server.

Secure Browsing (builds 5.9.0.14 – 5.9.1.6)

- Supporting new terminal server 2019.
- An advanced Favorites synchronization between client and server side.
- Ability to add running scripts after installing Secure Browsing.
- Ability to open a local PDF file in Chrome and IE.

Bug Fixed

- Local DPF filed cannot be open remotely in Chrome.
- Wrong adjustment of Desktop icons published by COCKPIT for 32 and 64 bits resolution.

- Text items are not clear on some backgrounds (text shadow).
- In Admin Console. Exclusive Access setting does not provide access to a specified terminal.
- Corruption of Font settings after reconnecting to site.
- When connecting to a local Outlook site and clicking Mailto option, Outlook is open remotely and the local browser closed.
- Pressing on the email link closes the browser in Secure Browsing.
- Favorites view does not work properly in single site mode in COCKPIT client.
- Sometimes user failed to run 32 bit published Applications.
